THE ALASKA WIRELESS NETWORK, LLC AND T-MOBILE LICENSE LLC SEEK FCC CONSENT TO THE ASSIGNMENT OF A LOWER 700 MHZ A BLOCK LICENSE

WT Docket No. 15-265

PLEADING CYCLE ESTABLISHED

Petitions to Deny Due: December 1, 2015
Oppositions Due: December 11, 2015
Replies Due: December 18, 2015

I. INTRODUCTION

The Alaska Wireless Network, LLC, a wholly-owned subsidiary of GCI Communication Corp. (together with The Alaska Wireless Network, LLC, “AWN”), and T-Mobile License LLC, a wholly-owned subsidiary of T-Mobile USA, Inc. (together with T-Mobile License LLC, “T-Mobile,” and together with AWN, the “Applicants”) have filed an application pursuant to section 310(d) of the Communications Act of 1934, as amended,¹ seeking the assignment of a Lower 700 MHz A Block license to AWN. The subject license covers Alaska. The proposed transaction involves the assignment of spectrum; no customers would be transferred.

The Applicants maintain that the proposed transaction would provide AWN with additional spectrum in the geographic area authorized under the license that would improve its ability to compete with national service providers in more urban areas of Alaska and allow it to expand wireless broadband access to rural communities where national service providers have yet to deploy wireless facilities.

Our preliminary review indicates that AWN would be assigned 12 megahertz of Lower 700 MHz A Block spectrum in 29 boroughs covering four Cellular Market Areas (“CMAs”) in Alaska.² Post-transaction, AWN would hold 112 to 162 megahertz of spectrum in total, and 12 to 62 megahertz of below-1-GHz spectrum, in these four CMAs.

The *Mobile Spectrum Holdings Report and Order* requires, where the entity acquiring below-1-GHz spectrum already holds approximately one-third or more of the below-1-GHz spectrum in a particular market, that the demonstration of the public interest benefits of the proposed transaction will need to clearly outweigh the potential public interest harms.³ In Bethel borough in CMA 316 (Alaska 2 –

Bethel), AWN already holds 50 megahertz of below-1-GHz spectrum and, as a result of this transaction, would increase its holdings to 62 megahertz of such spectrum.
